AI ADOPTION, INVESTMENT AND WORKFORCE MANAGEMENT

# Turn AI adoption evidence into better investment decisions

PromptLeash helps organisations understand what is being adopted, where value is emerging and what requires attention, across people, agents, roles and workflows.

## THE PROBLEM

AI leaders face budget decisions without consistent evidence of what works. Usage data is fragmented, savings are easy to overstate, and activity doesn't show whether work is improving.

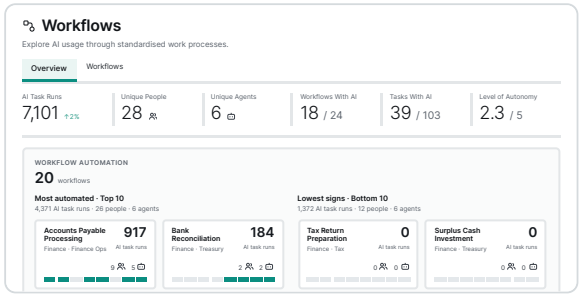

## HOW PROMPTLEASH SOLVES IT

PromptLeash measures AI adoption and outcomes, recommends where to invest or intervene, and improves capability without losing sight of risk and workforce resilience.

## Adoption & Investment

Chief AI Officer

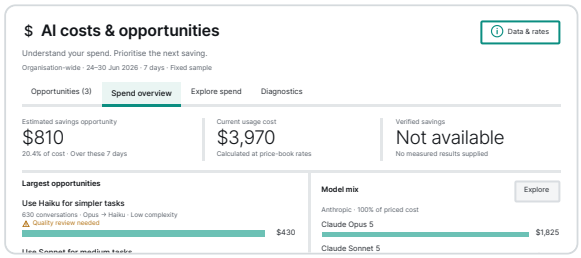

- **Baseline** use, quality, time saved and risk by team.
- **Prioritise** workflows where AI potential exceeds current use.
- **Report** progress to the board with evidence, not anecdotes.

## Cost & Risk

CFO · CIO · CISO

- **Redirect** spend to where more value is created.
- **Manage** which tools to allow and **negotiate** better.
- **Update** policies and guardrails based on evidence.

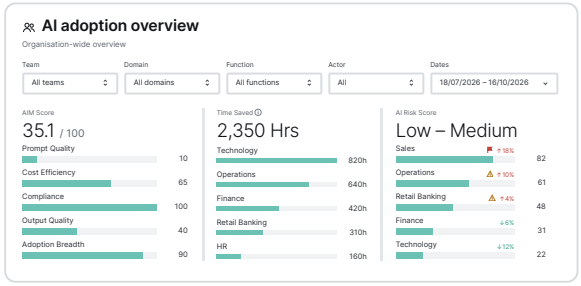

## Workforce

CHRO

- **Accelerate** proficiency with personalised recommendations.
- **Target** training at the largest gaps and **track** progress.
- **Spot** champions to spread good practice across teams.

IN DEVELOPMENT Manage judgement quality, capability and resilience as AI takes on more work.

## WHY PROMPTLEASH

### Every approved AI source

People and agents across vendors, in one adoption picture.

### Work context

By process and role, not token counts. Your team validates the mapping.

### Enterprise privacy

Runs in your environment. No data leaves, no desktop or browser agents.

### Meet us at SFF 2026 · Australia Pavilion, Hall 5, Booth 5A19

Let's shape a 30-day AI Investment Baseline: an adoption map, spend and risk baseline, workflow opportunity shortlist and executive recommendations.
